# Software Requirements Specification (SRS)

```

1. **Introduction**

1.1 **Purpose**

This document outlines the software requirements for a simple HTML-based web application that allows users to register, login, and navigate between pages. The system is designed to provide basic user interface elements for account registration and login, with navigation links between different static pages.

1.2 **Scope**

The web application will include the following functionalities:

- A main page where users can choose to navigate to the login or registration pages.
- A login form where users can input their username and password.
- A registration form for new users to create an account.
- Navigation between the login, registration, and main (index) pages.
- A confirmation page after a successful login.
- Basic page layout and styling.

1.3 **Audience**

This document is intended for:

- Developers who will implement the web application.
- Testers who will validate the application's basic HTML and CSS functionality.
- Project managers overseeing the development process.

2. **Overall Description**

2.1 **Product Perspective**

The product is a standalone HTML and CSS-based web application that will function on any modern web browser. It does not include any backend or JavaScript functionality for form submission or validation.

2.2 **Product Functions**

- ****Main Page (index.html):****
 - Provides options to navigate to the login or registration page.
- ****Login Page (login.html):****
 - Displays a form for users to input their username and password.
 - Includes a "Remember me" checkbox.
 - Provides a link to return to the main page.
- ****Registration Page (register.html):****
 - Displays a form for users to input their full name, email, username, and password.
 - Includes a password confirmation field.
 - Provides a link to return to the main page.
- ****Confirmation Page (welcome.html):****
 - Displays a message indicating successful login.
 - Provides a link to return to the main page.

2.3 ****User Characteristics****

The application is designed for general users with basic internet and computer literacy. No advanced technical skills are required to use the application.

2.4 ****Constraints****

- The application must run on any modern web browser (Chrome, Firefox, Safari, Edge).
- The application is purely static, with no backend processing or data storage.
- The design must be responsive to different screen sizes, particularly for mobile and desktop displays.

2.5 ****Assumptions and Dependencies****

- Users will access the application on modern browsers that support HTML5 and CSS3.
- No real authentication backend is required; the login and registration functionalities are purely demonstrative.

3. ****Specific Requirements****

3.1 ****Functional Requirements****

3.1.1 ****Main Page (index.html)****

- ****Navigation Options:****
 - Users must be able to select between "Login" and "Register" options.
 - The options must be visually distinct and centered on the page.
- ****Redirects:****
 - Selecting "Login" should redirect the user to `login.html`.
 - Selecting "Register" should redirect the user to `register.html`.

3.1.2 ****Login Page (login.html)****

- ****Form Fields:****
 - ****Username****: A text field that accepts the user's username.
 - ****Password****: A password field that accepts the user's password.
 - ****Remember me****: A checkbox to indicate the user's preference.
- ****Navigation:****
 - A "Go back" link must be present, redirecting the user to `index.html`.

3.1.3 ****Registration Page (register.html)****

- ****Form Fields:****
 - ****Full Name****: A text field for the user's full name.
 - ****Email****: An email field for the user's email address.
 - ****Username****: A text field for the user's chosen username.
 - ****Password****: A password field for the user's chosen password.
 - ****Confirm Password****: A password field to confirm the password.
- ****Navigation:****
 - A "Go back" link must be present, redirecting the user to `index.html`.

3.1.4 **Confirmation Page (welcome.html)**

- ****Display Message:****
 - A message indicating "Login Successful" should be prominently displayed.
- ****Navigation:****
 - A "Go back to Home" link must be present, redirecting the user to `index.html`.

3.2 **Non-Functional Requirements**

3.2.1 **Usability Requirements**

- The application must be user-friendly, with clear instructions and easy navigation.
- Forms must include labels and placeholders to guide the user.
- The design must be responsive, ensuring usability across various device sizes.

3.2.2 **Compatibility Requirements**

- The application must be compatible with the latest versions of major web browsers: Chrome, Firefox, Safari, and Edge.
- The design must be mobile-responsive, adapting gracefully to different screen sizes.

4. **User Interface Requirements**

4.1 **General Layout**

- The design must be clean and minimalistic, with a focus on usability.
- Buttons and links should have a consistent style and be easily distinguishable.
- Input fields should be uniformly styled, with adequate padding and margin to ensure a clean layout.

4.2 **Navigation**

- The main navigation options (Login, Register) should be accessible from every page.
 - A "Go back" link should be provided on the login, registration, and confirmation pages, leading to the main page.
- \\
